

HAO PING (BROWN) CHUANG

+886-911-888-884 ◇ Remote (Timezone: GMT+8 / Flexible to US/EU hours) ◇ [Email](#) ◇ [Portfolio](#)

PROFILE

Performance-driven Senior Frontend Engineer with 7+ years of experience specializing in scalable architecture, state management optimization, and client-side performance tuning for high-traffic environments. Expert in the React/Next.js and Vue/Nuxt.js ecosystems, with a history of driving successful migrations that directly improve Core Web Vitals, initial bundle sizes, and user retention. Adept at navigating high-trust, asynchronous remote settings, providing technical leadership to distributed teams, and leveraging cutting-edge AI engineering tools to accelerate product delivery.

SKILLS

Frontend Core	React, Next.js, TypeScript, JavaScript (ES6+), State Management (Zustand, Redux, Context API), Vue, Nuxt.js,
UI & Performance	HTML5, CSS3, Sass, TailwindCSS, Responsive Web Design, Core Web Vitals Optimization, DevTools Performance Tuning, Cross-Browser Compatibility
Testing & Tooling	Jest, Vitest, Cypress, Git, CLI, AI-assisted development, Claude Code
Backend & Infra	Node.js, Nest.js, RESTful APIs, GraphQL, PostgreSQL, MySQL, Redis, AWS (Lambda, S3, EC2), Docker, CI/CD, Vercel
Soft Skills	Product Ownership, E2E Feature Development, Remote Collaboration, Asynchronous Communication, Technical Leadership

EXPERIENCE

Senior Frontend Engineer	Nov 2024 - Mar 2026
AU Soft (B2B SaaS)	Remote

- System Architecture:** Led core product's frontend refactor from MVC to MVVM, decoupling client-side state and reducing initial bundle sizes by 30% using Next.js App Router and Zustand; minimized layout shifts to improve core web vital metrics and boost user retention by 20%.
- Technical Leadership:** Established frontend code quality and architecture for a distributed engineering team of 5-7 developers, providing technical mentorship, conducting deep code reviews, and establishing modern CI/CD automation pipelines alongside robust Jest/Cypress test suites to ensure 90%+ code coverage.
- Real-Time Optimization:** Engineered low-latency UI data-polling mechanics and real-time state synchronization, ensuring instantaneous application updates across cross-browser interfaces under heavy concurrent traffic.

Lead Frontend Engineer	Jan 2023 - Sep 2024
Oracle	Taipei, Taiwan

- Enterprise Engineering:** Served as Lead Frontend Engineer for business intelligence and corporate banking platforms, translating complex enterprise product requirements into robust, reusable UI component libraries.
- Global Collaboration:** Maintained a high-trust asynchronous workflow as the core technical bridge between global product management and local engineering teams, aligning system capabilities with strict enterprise security and stability compliance standards.
- Production Engineering:** Diagnosed and resolved critical performance bottlenecks and memory leaks within legacy dashboards, optimizing DOM element handling and improving data-rendering speeds by 5%.

Founding Frontend Engineer	Dec 2021 - Dec 2022
Artisse Interactive	Remote

- 0-to-1 Architecture:** Architected a high-concurrency digital asset hub and e-commerce marketplace platform from scratch, standardizing on Next.js, TypeScript, and optimized global state management to handle multi-chain transactional flows.

- **Rapid Scale:** Accelerated product delivery from initial blueprint to production deployment in under 6 months, scaling client-side infrastructure to support over 10,000 active concurrent users during high-traffic intervals.
- **State Optimization:** Designed secure, predictable API client contracts and managed high-frequency asynchronous authentication schemas via multi-wallet protocols to guarantee UI data integrity and eliminate synchronization latency.

Software Engineer

Dec 2019 - Nov 2021

Bet365 (B2B SaaS)

Remote

- **System Refactor:** Contributed to a massive legacy migration over to a modern, type-safe React ecosystem, implementing standard design systems and efficient re-rendering logic that elevated user retention metrics by 10%.
- **Agile Collaboration:** Partnered with a distributed team of 12 developers to implement robust frontend architectures, maintain tight agile sprint adaptations, and drive continuous integration best practices.
- **Code Quality:** Actively participated in cross-team technical alignment, executed deep code peer reviews, and authored comprehensive frontend integration tests to ensure enterprise stability.

Software Engineer

May 2018 - Nov 2019

LinkedIn

United States

- **High-Traffic Systems:** Developed, tuned, and optimized modular web layouts for global web application interfaces serving millions of daily active users.
- **Performance Optimization:** Achieved significant performance upgrades across consumer-facing surfaces, slashing Time-to-Interactive (TTI) by up to 15% and optimizing critical rendering paths.
- **Engineering Culture:** Immersed in best engineering practices; wrote comprehensive technical design documentation, participated in feature peer reviews, and collaborated on data-driven UX adjustments.

EDUCATION

B.A. Computer Science (STEM Designated), Boston University

Aug 2014 - May 2018
